

Week 5 Report

In this week,

1. I collected new books data from the *Goodreads* (<https://www.goodreads.com/>) Now, there are totally 37 books data in biography, including book's name, author, rating, the number of rating people and the publish year. These attributes meet my demands.
2. I added the parts of copyright and the button for loading more books.
3. I edited the web page and make sure it shows the information of the book. Like shown below:

Order by **Rating**:

Book Sorting

Tag: Biography Order by: Rating / Rating Count / Publish Year

- 

Leonardo da Vinci (Hardcover)
by *Walter Isaacson*
Rating: 4.18
17382 ratings
published 2017
- 

Born a Crime: Stories From a South African Childhood
by *Trevor Noah*
Rating: 4.44
154228 ratings
published 2016

Now, we can directly see the information of book and estimate whether it sort book in the right way.

Problem:

1. Get wrong in adjust the attributes of data in database.

Solution: I follow the step in following reading:

<https://docs.djangoproject.com/en/2.1/topics/migrations/>

In the next week, I will:

1. Use jQuery to achieve to display another 20 books while only display 20 books without click the “Load More...” button.
2. Add the link of each book that is the book detailed page on the *Goodreads* (<https://www.goodreads.com/>).
